

635 PHOTOVOLTAIC PANEL

635Watt MONO-FACIAL MODULE N-Type Certified to withstand: wind load (2400 Pascal) and snow load (5400 Pascal). Enhanced Mechanical Load 2400 Pa 5400 Pa PID Resistance Excellent Anti-PID performance guarantee via optimized pass-diode product material control. 2.0 Hot 2.0 Technology The N-type module with Hot 2.0 technology has better performance.

A photovoltaic system, or solar PV system is a power system designed to supply usable solar power by means of photovoltaics. It consists of an arrangement of several components, including solar panels to absorb and directly convert sunlight into electricity, a solar inverter to change the electric current from DC to AC, as well as mounting, cabling and other electrical accessories.

The theory of solar cells explains the process by which light energy in photons is converted into electric current when the photons strike a suitable semiconductor device. The theoretical studies are of practical use because they predict the fundamental limits of a solar cell, and give guidance on the phenomena that contribute to losses and solar cell efficiency.

For example, if you install a 7 kW solar panel system on your roof in
Phoenix, you'll generate about 25 percent more electricity than if you
installed the same system in Boston. That doesn't mean you have to live
in Arizona for solar to be a good option for your home a?? solar is a smart
investment wherever electricity rates are high.
