About the Energy Storage: United Nation's Secretary-general António Guterres, speaking at the launch of the World Meteorological Organization's state of the global climate report on 18th may 2022, said: "First, renewable energy technologies, such as battery storage, must be treated as essential and freely available global public goods

This book discuss the recent developments in energy harvesting and energy storage systems. Sustainable development systems are based on three pillars: economic development, environmental stewardship, and social equity. One of the guiding principles for finding the balance between these pillars is to limit the use of non-renewable energy sources.

Green energy harvesting aims to supply electricity to electric or electronic systems from one or different energy sources present in the environment without grid connection or utilisation of batteries. These energy sources are solar (photovoltaic), movements (kinetic), radio-frequencies and thermal energy (thermoelectricity). The thermoelectric energy ???

From systems using electrochemical transformations, to classical battery energy storage elements and so-called flow batteries, to fuel cells and hydrogen storage, this book further investigates storage systems based on physical principles (e.g., gravitational potential forces, air compression, and rotational kinetic energy).

Energy storage can be defined as the process in which we store the energy that was produced all at once. This process helps in maintaining the balance of the supply and demand of energy. radiation, and matter's physical characteristics. The four principles of thermodynamics regulate the behaviour of these quantities, which provide a
