

A REVIEW OF EUROPEAN ENERGY STORAGE SUBSIDY POLICIES

INTEGRATED DESIGN
EASY TO TRANSPORT AND INSTALL
FLEXIBLE DEPLOYMENT

Should energy storage operators compete for subsidy contracts? In several countries, revised capacity markets now allow energy storage operators to compete for subsidy contracts on a more equal footing with power generators. Support from the European Battery Alliance and ???1 billion in loans from the European Investment Bank in 2020 alone should help shore up investor confidence.

How will the European Commission support large-scale energy storage in Spain? The European Commission on Monday approved a new aid scheme for the deployment of large-scale electricity storage in Spain. Subsidies will be available for standalone energy storage sites, projects installed alongside renewable energy facilities, and storage planned as part of thermal power plants.

FLEXIBLE DEPLOYMENT

What does the European Commission say about energy storage? The Commission adopted in March 2023 a list of recommendations to ensure greater deployment of energy storage, accompanied by a staff working document, providing an outlook of the EU???s current regulatory, market, and financing framework for storage and identifies barriers, opportunities and best practices for its development and deployment.

FLEXIBLE DEPLOYMENT

How much energy storage will Europe have in 2022? Many European energy-storage markets are growing strongly, with 2.8 GW (3.3 GWh) of utility-scale energy storage newly deployed in 2022, giving an estimated total of more than 9 GWh. Looking forward, the International Energy Agency (IEA) expects global installed storage capacity to expand by 56% in the next 5 years to reach over 270 GW by 2026.

FLEXIBLE DEPLOYMENT

How big will energy storage be in the EU in 2026? Looking forward, the International Energy Agency (IEA) expects global installed storage capacity to expand by 56% in the next 5 years to reach over 270 GW by 2026. Different studies have analysed the likely future paths for the deployment of energy storage in the EU.

FLEXIBLE DEPLOYMENT

How much energy storage capacity does the EU need? These studies point to more than 200 GW and 600 GW of energy storage capacity by 2030 and 2050 respectively (from roughly 60 GW in 2022, mainly in the form of pumped hydro storage). The EU needs a strong, sustainable, and resilient industrial value chain for energy-storage technologies.
