Who can benefit from a new off-grid solar scheme in Benin?

Households, smallholders and entrepreneurs in remote locations across Benin will be able to access reliable and cheap electricity for the first time under a new off-grid solar scheme agreed between leading solar energy company ENGIE Energy Access and the European Investment Bank, one of the world's largest financiers of renewable energy.

How will a European Investment Bank loan help Benin? The European Investment Bank has agreed to provide a EUR 10 million loan to support the deployment of 107,000 high-quality solar home systems to Benin. This will open up access to clean energy for 643,000 people. The solar home systems include solar panels and battery storage to be sold on Pay-As-You-Go (PAYGO) contracts.

What is Benin's current energy situation? This section provides information on Benin's current energy situation with energy demand-and-supply scenarios. According to the International Renewable Energy Agency (IRENA), 41% of Benin's population currently have access to electricity.

Which institutions are working to provide access to affordable energy in Benin? Several institutional frameworks in the energy sector in Benin are working to provide access to affordable energy in the country. The ME is the biggest institution of the energy sector, responsible for the management of the energy sector and in charge of the implementation of RE projects.

Will Benin provide 100% electricity to its community by 2050? Solar photovoltaic (PV) accounts for 0.30% of the mix by form of energy compared with 1.36% in 2016, as shown in Fig. 3. This shows that the government must make more effort to provide 100% electricity access to its community by 2050. Electricity mix of Benin from 2016 to 2020.

What type of energy is used in Benin? The evolution of the electrical mix of Benin indicates that, in 2020, natural gas was the first form of energy used to produce electrical energy, representing a proportion of 71.63%. Solar photovoltaic (PV) accounts for 0.30% of the mix by form of energy compared with 1.36% in 2016, as shown in Fig. 3.

Benin Republic is a small country in SSA which extends on a total area of 114,760 km<sup>2</sup> and has a relatively small population of about 10.87. And this sense of "inferior" or "temporary" nature of these solutions reduces their acceptability and attractiveness both renewable (solar and small hydropower) and non-renewable (DG) energy.

The pilot Illouloufin solar project, named DEFISSOL is being implemented on a 26-hectare site. Eiffage initially planned to set up 47,212 PV modules with the power capacity of 530 Wp each, string inverters, and six 3 MVA power transformation stations.

In summary, as solar radiation is an abundant resource across the country, this hybrid PV/DG/battery system can be a suitable model to power remote areas in Benin, and we recommend it for future electrification projects in the country in place of the current widely deployed PV/battery system. "Hybrid off-grid renewable power system for

In this study, multicriteria decision-making (MCDM) methods are used to prioritize alternatives such as solar photovoltaic (PV), concentrated solar power (CSP), wind energy, hydropower, and

3 Future prospects for RE and government targets in Benin 3.1 Solar PV It is worth noticing that solar PV will play a crucial role in Benin's future energy development. Adamou R. Hybrid off-grid renewable power system for sustainable rural electrification in Benin. Renew Energy, 2020, 145:1266-1279. Toure S, Karoubi E. Benin

Gillian-Alexandre Huart, CEO of ENGIE Energy Access, emphasized the company's strategy in Benin, highlighting its flexible and cost-effective solutions designed to address the diverse energy needs of both residential and commercial sectors.

To provide access to clean energy services to its communities, the government of Benin has recently inaugurated a 25-MW solar PV system. The solar power plant of Illouloufin is the first solar plant integrated into the grid with a storage system.

The European Investment Bank has agreed to provide a EUR 10 million loan to support the deployment of 107,000 high-quality solar home systems to Benin. This will open up access to clean energy for 643,000 people.

Benin also relies heavily on Russia and Ukraine for wheat and fuel imports. Prices for these commodities have skyrocketed since the full-scale invasion of Ukraine in February 2022, causing a need for stronger food subsistence and renewable energy sources. 3.4 million people in Benin were food insecure in 2022, almost twice as much as the number in 2020.
