Can an EV be used as a mobile energy storage vehicle? Using an EV as a mobile energy storage vehicle turns an underutilized asset (car + battery) into one that helps solve several growing challenges with the power grid and provides a potential economic engine for the owner.

Is EV battery storage worth it? What gives EV battery storage increased value over a stationary storage battery is its mobility, its ability to tap into excess clean energy closer to the source (workplace, schools, malls, etc) where the infrastructure can be put in place to capture a huge supply of electricity and then transfer that excess power to a parking lot full of EVs.

How big is the EV battery market? Today, the market for batteries aimed at stationary grid storage is small??? about one-tenth the size of the market for EV batteries, according to Yayoi Sekine, head of energy storage at energy research firm BloombergNEF.

What are the benefits of V2G and EV battery storage? Utilities benefit greatly from the use of V2G capabilities and EV battery storage as it reduces the need to build new peaker power plants, invest in massive battery storage systems and to have to pay other grid operators to take their excess clean energy. Say you drive to work from the suburbs to an office park 35 miles away from home.

Is an electric vehicle an asset of negative value? Today automotive vehicles are an asset of negative value when not in motion transporting people and cargo. In the future, however, an electric vehicle (EV) connected to the power grid and used for energy storage could actually have greater economic value when it is actually at rest.

Will EV batteries be able to meet EV needs? But it???s not clearwhether these batteries will be able to meet needs for EV range and charging time,which is why several companies going after the technology,like US-based Natron,are targeting less demanding applications to start,like stationary storage or micromobility devices such as e-bikes and scooters.

(Editor's Note: For additional background on the challenge of an increasing amount of excess clean energy and EVs and vehicle to grid (V2G) programs, read this sidebar article: EVs as Demand Response Vehicles for the Power Grid and Excess Clean Energy.)
