

CHINA NETWORK BUCHAREST ENERGY STORAGE

Is China's energy storage sector growing? According to the report, China's energy storage sector has maintained a rapid growth momentum from 2023, with new energy storage capacity expanding from 8.7 million kilowatts in 2022 to 31.39 million kW last year. On the other hand, new energy storage plants in China are increasingly shifting toward centralized, large-scale installations, it said.

Will China reach 30gw of energy storage by 2025? The deployment of new type energy storage capacity almost quadrupled in 2023 in China, increasing to 31.4GW, up from just 8.7GW in 2022, according to data from the National Energy Administration (NEA). This means that China surpassed its target of reaching 30GW of the new type energy storage by 2025 two years earlier than planned.

Why is energy storage technology needed in China? In China, RES are experiencing rapid development. However, because of the randomness of RES and the volatility of power output, energy storage technology is needed to chip peak off and fill valley up, promoting RES utilization and economic performance.

How does China promote battery storage? To promote battery storage, China has implemented a number of policies, most notably the gradual rollout since 2017 of the mandatory allocation of energy storage policy (1/4 of new capacity), which is also known as the new energy plus storage model (1/2 of new capacity).

How big is China's energy storage capacity? State Grid Corp of China currently has a scale of 36.80 million kW or 77.56 million kilowatt-hour of new energy storage, with 95 percent of this capacity becoming operational over the past three years, underscoring the accelerated pace of energy storage deployment across China.

Where does China's storage capacity come from? The majority of China's storage capacity comes from large-scale storage projects, such as hydropower with reservoirs on the Yangtze River and gigawatt-level battery energy storage systems in Inner Mongolia.
