

# COSTA RICA ENERGY STORAGE RANKING

What is Costa Rica's energy policy? Costa Rica's energy policy aims to move from a fossil fuels based energy system towards renewable energy sources and to expand its power generation capacity, replacing old power generating stations and developing new projects.

What percentage of Costa Rica's electricity comes from renewable sources? So far in 2021, 99.98% of Costa Rica's electric power has come from renewable sources. Costa Rica has generated 73.39% of its energy from hydropower, 13.84% from geothermal sources, 12.12% from wind and 0.63% from biomass and solar panels.

How much electricity does Costa Rica use? Electricity consumption in Costa Rica is estimated to grow 0.36% in 2022 compared to 2021, which reached about 11,564 gigawatt hours (GWh). In 2019, Costa Rica generated 67.5% of its energy from hydropower, 17% from wind, 13.5% from geothermal sources and 0.84% from biomass and solar panels.

Can Costa Rica save money from fossil fuels? Still, the Costa Rican government says its clean energy generation, which powers more than 1.5 million homes and 225,000 businesses, has saved the country nearly \$500 million over the past 20 years compared to relying on fossil fuels.

Does Costa Rica have solar power? Costa Rica has tremendous potential for solar PV. When restricted by its proximity to power lines and terrain slope, currently, Costa Rica's total installed wind power capacity is about 408 MW of onshore wind farms. (no higher than 30%), Costa Rica has over 8,000 km<sup>2</sup> of land on which 200 GW of solar power can potentially be generated.

How much carbon dioxide does Costa Rica emit? These numbers do not include the fossil-fuel dependent transportation sector, which is responsible for 66% of hydrocarbon consumption and 54% of carbon dioxide emissions in Costa Rica.
