

# CRANE ENERGY STORAGE POWER GENERATION

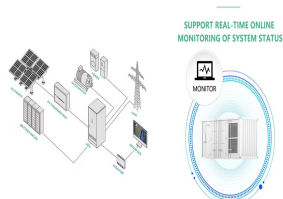

How does a concrete crane work? Simple. The crane uses excess energy from renewables to lift concrete blocks, and when the power is required, the crane lifts blocks, and the generator produces it. The process is similar to a pumped-storage hydropower plant (HPP), with water substituted with concrete blocks and gravity doing the rest.

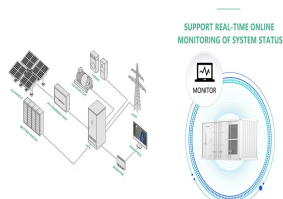

How much do energy storage systems cost? Existing energy storage systems are currently very costly. Take Tesla's 100MW/129MWh battery technology in Australia, for example, which cost the company around \$66m to produce.

What is energy storage and how does it work? The process is similar to a pumped-storage hydropower plant (HPP), with water substituted with concrete blocks and gravity doing the rest. The energy storage technology has been invented by a Swiss-based startup called Energy Vault, which recently received a USD 110 million investment from Softbank Group. Why storage?

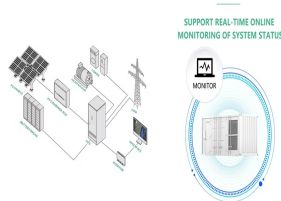

Is Tata Power bringing a gravity storage system into commercial operation? Indian energy provider Tata Power was one of the first firms to show interest in bringing the gravity storage system into commercial operation. In November 2018, Energy Vault made a deal with Tata Power to deploy a 35MWh system this year.

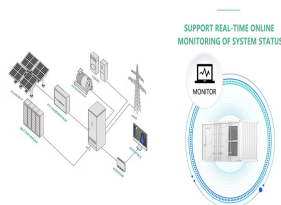

Does Energy Vault have a gravitational energy storage tower? Energy Vault secured \$100 million in Series C funding for its EVx tower, which stores gravitational potential energy for grid dispatch. The EVx energy storage tower lifts composite blocks with electric motors. How does gravity based energy storage work? ???In each gravity-based energy storage, a certain mass is moved from a lower point to an upper point ??? with the use of a pump, if water for example ??? which represents ???charging??? the storage, and from a higher to a lower point which creates a discharge of energy,??? says Energy Vault CEO and co-founder Robert Piconi.

The EVx platform is a six-arm crane tower designed to be charged by grid-scale renewable energy. It lifts large bricks using electric motors, thereby creating gravitational energy. When power needs to be discharged back to the grid, the bricks are lowered, harvesting the ???
