

DEFINITION STANDARDS FOR PORTABLE SMALL ENERGY STORAGE PRODUCTS

How should battery energy storage system specifications be based on technical specifications? Battery energy storage system specifications should be based on technical specification as stated in the manufacturer documentation. Compare site energy generation (if applicable), and energy usage patterns to show the impact of the battery energy storage system on customer energy usage. The impact may include but is not limited to:

What are the customer requirements for a battery energy storage system? Any customer obligations required for the battery energy storage system to be installed/operated such as maintaining an internet connection for remote monitoring of system performance or ensuring unobstructed access to the battery energy storage system for emergency situations. A copy of the product brochure/data sheet.

What if energy storage system and component standards are not identified? Energy Storage System and Component Standards 2. If relevant testing standards are not identified, it is possible they are under development by an SDO or by a third-party testing entity that plans to use them to conduct tests until a formal standard has been developed and approved by an SDO.

What is a battery energy storage system? Battery energy storage system (BESS): Consists of Power Conversion Equipment (PCE), battery system(s) and isolation and protection devices. Battery system: System comprising one or more cells, modules or batteries. Pre-assembled battery system: System comprising one or more cells, modules or battery systems, and/or auxiliary equipment.

What is a pre-assembled integrated battery energy storage system? Pre-assembled integrated BESS: Battery energy storage system equipment that is manufactured as complete, pre-assembled integrated package. The equipment is supplied in an enclosure with PCE, battery system, protection device(s) and any other required components as
