

DEMAND FOR AIR ENERGY STORAGE

POWER GENERATION CONSTRUCTION

How can compressed air energy storage improve the stability of China's power grid? The intermittent nature of renewable energy poses challenges to the stability of the existing power grid. Compressed Air Energy Storage (CAES) that stores energy in the form of high-pressure air has the potential to deal with the unstable supply of renewable energy at large scale in China.

Can compressed air energy storage improve the profitability of existing power plants? Linden Svd, Patel M. New compressed air energy storage concept improves the profitability of existing simple cycle, combined cycle, wind energy, and landfill gas power plants. In: Proceedings of ASME Turbo Expo 2004: Power for Land, Sea, and Air; 2004 Jun 14-17; Vienna, Austria. ASME; 2004. p. 103-110. F. He, Y. Xu, X. Zhang, C. Liu, H. Chen

What is advanced compressed air energy storage (a-CAES)? Hydrostor has a patented Advanced Compressed Air Energy Storage (or A-CAES) technology that delivers clean energy on demand, even when solar and wind power are unavailable. A-CAES can provide energy for 8-24+ hours, helping to balance supply and demand on the grid, with an operational lifespan of 50+ years with no efficiency degradation.

Is underground air storage a viable energy storage option? Underground air storage is a large-scale energy storage option with relatively low cost (Table 3). The two existing commercial CAES plants, the Huntorf plant and the McIntosh plant, both use underground salt cavern for energy storage.

How is energy storage configured? Energy storage is generally configured according to the wind energy rejection rate. Here, the ratio of power capacity between energy storage and grid-connected wind power is set equal to the wind energy rejection rate, so that wind power generation can be connected to the grid.
