What are industrial after sale services? The information generated would then open the door to other types of industrial after sale services for the entire pool of machines sold, which may constitute major sources of recurring income and reinforce customer loyalty for the future sale of machinery, e.g., availability contracts, retrofitting of machines, and renting and leasing contracts.

What is the purpose of Industry 4.0 in the after sale maintenance service? Later phases, on the other hand, permit acting upon the alerts generated by these Industry 4.0 technologies for fine-tuning the necessary resources (i.e., management of stocks of spare parts, and dynamic scheduling of maintenance tasks) for the service's deployment; hence the purpose of Industry 4.0 in the after sale maintenance service.

What is the after sale maintenance framework? The after sale maintenance framework thereby provides information on the return on investment of Industry 4.0 for machinery, through the after sale maintenance service, which is of particular interest for a firm's business outlook (e.g., funds spent vs. funds generated). There follows a description of each one of the model's eight phases.

What if after sale activity is considered as a cost? The result of the case studies analysis can be summarized in the next points: 1. The companies where the after sale activity is considered as a cost have reactive attitude, mainly corrective maintenance and very few planned activities. More than 60% of the companies adopted this strategy. 2.

What should be included in the management of after sale maintenance? The decision-making process within the management of after sale maintenance should include technical indicators of reliability and maintenance, with cost indicators that include the consequences of failure events, as well as service level indicators. This consideration will allow maximising the service's cost-risk-profit relationship.
