Can energy storage flexibly participate in power system frequency regulation? This paper proposes a control strategy for flexibly participating in power system frequency regulation using the energy storage of 5G base station. Firstly, the potential ability of energy storage in base station is analyzed from the structure and energy flow.

Can large-scale energy storage power supply participate in power grid frequency regulation? In recent years, the use of large-scale energy storage power supply to participate in power grid frequency regulation has been widely concerned. The charge and discharge cycle of frequency regulation is in the order of seconds to minutes. The state of charge of each battery pack in BESS is affected by the manufacturing process.

What happens when a power system requires frequency regulation? As a result, when the power system requires frequency regulation, the power supply mode of base station is changed from the distribution grid to energy storage under the premise of satisfying the minimum backup capacity. In this way, the demand of the power system reduces, and system frequency improves.

What is the application of energy storage in power grid frequency regulation services? The application of energy storage in power grid frequency regulation services is close to commercial operation. In recent years, electrochemical energy storage has developed quickly and its scale has grown rapidly. Battery energy storage is widely used in power generation, transmission, distribution and utilization of power system.

Can energy storage station and conventional generating units be jointly considered for frequency regulation? In [13], the energy storage station and conventional generating units are jointly considered for the power system frequency regulation. The proposed strategy improves the

What is the primary responsibility of the base station energy storage? The primary responsibility of the base station energy storage is to protect the power supply of the base station, so the dynamic backup capacity of the base station in real time will be considered in the future.
