A small but growing number of countries are well on their way to producing all of their electricity from renewable sources. Dominica, in the eastern Caribbean, is planning to join these pioneers and become the first small island developing State (SIDS) to stop using fossil fuels for energy generation.

SWM's renewable energy systems. In the expansion of green electricity generation, SWM gives preference to regional projects. But the city of Munich and the surrounding metropolitan region are very densely populated. Sun and wind availability for energy generation is limited in this area, and Bavaria's 10-H distance rule makes wind energy

German municipal utility Stadtwerke Muenchen (SWM) has launched construction work on two projects for ground-mounted solar farms with a combined output of 8.98 MWp in the state of Bavaria which will supply green electricity to more than 4,000 households.

The Government is committed to make Dominica the first climate-resilient nation by 2030 and is working to create favourable conditions for future sustainable investments in renewable energies. As the island most advanced in geothermal explorations, Dominica is already a leader in renewable energy in the Caribbean.

Poised between the tumultuous Atlantic Ocean and calmer Caribbean Sea, Dominica lacks the award-winning beaches of its neighboring islands, but it more than makes up for it with natural hot springs and swimming holes under jungle waterfalls. The island is even home to a submerged fumarole that releases spectacular veils of bubbles.
