According to the objectives of China's "Energy-saving and New Energy Vehicle Technology Roadmap 2.0", by 2035, the annual sales of China's energy-saving vehicles and new energy vehicles will each account for 50 %, and all conventional ICE vehicles will be converted to hybrid electric vehicles.

Plug-in electric vehicles (PEVs) can be divided into two major categories: battery PEVs and hybrid PEVs. discharging control of grid-connected electric vehicles. J. Energy Storage 28

Electric Vehicles (EVs) are vehicles that operate using electric-drive technologies, such as battery electric vehicles, plug-in hybrid electric vehicles, and fuel cell electric vehicles, offering low to zero carbon emissions, high efficiency, and flexibility in grid integration, contributing to a sustainable and clean energy transition in the transportation sector.

Unlike gas-powered vehicles, energy use with plug-in electric vehicles is measured in kilowatt-hours per 100 miles, or kWh/100mi. Battery-electric vehicles are more energy-efficient compared to gas-powered vehicles. BEVs can convert 80 to 85% of available energy into forward motion, while conventional gas-powered vehicles only convert 25%
