The life of a transformer is largely determined from the insulation's strength. Overloading is observed to be one of the major causes for insulating material deterioration since it creates thermal stress in the windings and the core. Battery Energy Storage System (BESS) units are a promising solution to manage the overloading of DT.

The sensible heat of molten salt is also used for storing solar energy at a high temperature, [10] termed molten-salt technology or molten salt energy storage (MSES). Molten salts can be employed as a thermal energy storage method to retain thermal energy. Presently, this is a
