

ENERGY STORAGE BUSINESS FORM

Are energy storage business models the future? The lessons from twelve case studies on energy storage business models give a glimpse of the future and show what players can do today. The advent of new energy storage business models will affect all players in the energy value chain. In this publication we offer some recommendations.

Is energy storage a new business opportunity? With the rise of intermittent renewables, energy storage is needed to maintain balance between demand and supply. With a changing role for storage in the energy system, new business opportunities for energy storage will arise and players are preparing to seize these new business opportunities.

How do energy stakeholders prepare for the energy transition? Energy stakeholders need to prepare today to capture the business opportunities in energy storage and develop their own business models. In the energy transition, new players offering intermittent power supply have disrupted the old business models of utilities. The rise of storage technology will again lead to a shift in the industry.

What is energy storage? New entrants designing energy services solutions around storage and digital offerings are knocking on the door. For these players energy storage is a mode to enter the market. Some players may only offer storage capacity and will act as independent storage operators, as opposed to the independent power producers we know today.

Are energy storage projects ready for a bright future? In anticipation of a bright future, the first projects with energy storage are being set up. We have analyzed some of these cases and clustered them according to their position in the energy value chain and the type of revenues associated with the business model.

What are the business models for large energy storage systems? The business models for large energy storage systems like PHS and CAES are changing. Their role is traditionally to support the energy system, where large amounts of baseload capacity cannot deliver enough flexibility to respond to changes in demand during the day.
