

ENERGY STORAGE CABINET ANTI-BACKFLOW

How do photovoltaic anti-backflow systems work? According to different system voltage levels, photovoltaic anti-backflow systems can be divided into single-phase anti-backflow systems, three-phase and energy storage system ones. In a power system, power is generally sent from the grid to the load, which is called forward current.

Why should I install an anti-backflow prevention solution? There are several reasons for installing an anti-backflow prevention solution:
 2.1.Limited by the capacity of the upper-level transformer, users have new grid system installation needs, but it is not allowed locally. 2.2.Due to some regional policies, grid connection is not allowed. Once it is found, the grid company will impose a fine.

How does a Deye inverter anti-backflow work? 4. The solution? Deye inverter anti-backflow working principle: install a meter with CT or current sensor at the grid-connected point. When it detects that there is current flowing to the grid, it will feed back to the inverter, and the inverter will immediately change its working mode and track from the maximum power point of MPPT.

Die Investition von Anti-Backflow-Geräten ist geringer, was für Orte geeignet ist, an denen der Strompreis niedrig ist und der Anteil des Rückflusses nicht hoch ist; die Investition von Energiespeichern ist höher., a?|
