Can super-insulating materials reduce energy losses in thermal energy storage? The adoption of super-insulating materials could dramatically reduce the energy losses in thermal energy storage (TES). In this paper, these materials were tested and compared with the traditional materials adopted in TES. The reduction of system performance caused by thermal bridging effect was considered using FEM analysis.

Are advanced insulation materials a promising insulation technology for storage tanks? Therefore, advanced insulation materials are a promising insulation technology for the storage tanks. The Super Insulating Materials (SIMs), such as Vacuum Insulation Panels (VIPs) and Aerogel Based Products (ABPs), have a 5 - 10 times lower thermal conductivity compared to the traditional insulating materials. [7,8,9].

Which insulating materials are used in thermal conductivity measurement? 2. Methodology 2.1. Thermal conductivity measurement of different insulating materials Expanded polystyrene (EPS), mineral wool and polyurethane foam (PU) represent the most common materials that are used in TES, while Vacuum Insulation Panels and Aerogel Based Products are innovative Super Insulating Materials (SIMs).

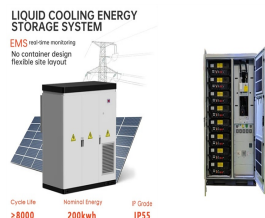

Are vacuum insulation panels a good solution for high insulated tanks? Fuchs B, Hofbeck K, Faulstich M. Vacuum insulation panels- A promising solution for high insulated tanks. Energy Procedia 2012; 30:424-427. Ghazi Wakili K, Bundi R, Binder B. Effective Thermal Conductivity of Vacuum Insulation panels. Build Res Inf 2004; 32:293-299. Fuchs B, Hofbeck K, Faulstich M. On vacuum insulated thermal storage.

How insulating materials affect TES net volume? Influence of insulating materials on TES net volume Several storage tank technical sheets show that a common material used for TES insulation is PU (layer 5cm thick). The corresponding thermal resistance is equal to 1.92 m<sup>2</sup>K/W .
