To address the above challenge, we present in this work a flame-retardant solid-liquid hybrid electrolyte (FRSE) in Li-metal batteries that simultaneously feature high Li<sup>+</sup> conductivity, high mechanical strength, and stable electrolyte/electrode interface (Fig. 1a-c). Unlike the previous strategies, an in-situ solidified process was applied in the battery to ???

This study provides an idea for improving the energy storage performance by combining the design of the composite dielectric structure and the control of nanofillers' defect and morphology. Zhang, Q.; Zhang, L.; Zhu, Y. W.; Guo, X.; Fan, P. Y.; Zhang, H. B. Ultrahigh discharged energy density in polymer nanocomposites by designing linear

The cathode/electrolyte interface shows an interdigital contact with increased contact area; additionally, an integrated structure is formed at the cathode/electrolyte interface ???

Zn-based electrochemistry is considered to be the most promising alternative to Li-ion batteries due to its abundant reserves and cost-effectiveness. In addition, aqueous electrolytes are more convenient to be used in Zn-based batteries due to their good compatibility with Zn-chemistry, thereby reducing cost and improving safety. Furthermore, Zn<sup>2+</sup>/Zn couples ???

The increasing demand for new energy vehicles and portable electronic devices has stimulated the development of energy storage devices for higher safety and higher energy Fan Feng: Visualization, Methodology, Formal analysis. Junhong Guo: Visualization, Formal analysis. Rui Wang: Writing ??? review & editing, Formal analysis. Jiayi Yu

Comprehensive assessment for battery energy storage systems based on fuzzy-MCDM considering risk preferences  
@article{Zhao2019ComprehensiveAF, title={Comprehensive assessment for battery energy storage systems based on fuzzy-MCDM considering risk preferences}, author={Haoran Zhao ???

Energy storage in dielectrics is realized via dielectric polarization  $P$  in an external electric field  $E$ , with the energy density  $U_e$  determined by  $U_e < P_r P_m E d P$ , where  $P_m$  and  $P_r$  are the maximum polarization in the charging process and remnant polarization in the discharging process, respectively (fig. S1 ).  $P_r$  manifests itself as the P-E hysteresis, which ???

Adiabatic compressed air energy storage system (AA-CAES) generally consists of an air compression module, a thermal energy storage module, an air storage module and an electricity releasing module. A schematic diagram of AA-CAES is given in Fig. 1. The theoretical analysis methods and basic description of the ejector device are given in this

Manganese dioxide,  $MnO_2$ , is one of the most promising electrode reactants in metal-ion batteries because of the high specific capacity and comparable voltage. The storage ability for various metal ions is thought to be modulated by the crystal structures of  $MnO_2$  and solvent metal ions. Hence, through combing the relationship of the performance (capacity and ???

, the company has deeply cultivated the electric vehicle battery business, forming a whole industrial chain layout with battery cells, modules, BMS and PACK as the core, extending upstream to mineral raw materials, expanding downstream to the echelon utilization of electric vehicles, energy storage power stations and power batteries, and building an integrated ???

Abstract Aqueous zinc-metal batteries are considered to have the potential for energy storage due to their high safety and low cost. Zhikun Guo. State Key Laboratory of Urban Water Resource and Environment, School of Chemistry and Chemical Engineering, Harbin Institute of Technology, Harbin, 150001 China Search for more papers by this

The initial results indicate that these fibers will be a good candidate to replace energy storage devices for miniaturized portable electronic applications. T. Fan, F. Guo, H. Lin and Y. Liu

Seeking for the advanced energy storage system with high energy density and safety is of great urgency due to the booming development of powerful electronics and electric vehicles [1], [2], [3], [4]. Since lithium (Li) metal possesses the high theoretical specific capacity (3860 mAh g<sup>-1</sup>) and low reduction potential (3.04 V vs standard hydrogen electrode), Li ???

Associated with the rapid development of 2D transition metal carbides, nitrides, and carbonitrides (MXenes), MXene derivatives have been recently exploited and exhibited unique physical/chemical properties, holding ???
