Potential Issues Without Pre-Grid Connection Inspection of Combiner Boxes:.. Abnormal Open Circuit Voltage: Excessive string voltage due to connecting too many PV panels, raising the combiner box voltage above the system's rated voltage, can degrade internal component performance over time, leading to component breakdown or even fires.

Combiner boxes live outside, so their enclosures must be tough. Look for boxes with a high IP rating (Ingress Protection), which tells you how well the box is protected from dust, water, and other environmental hazards. If your solar system is installed in a place with heavy rain or snow, you'll want a box with an IP65 rating or higher.

Solectria's arc fault-enabled combiner box, the ARCCOM, for example, includes string-level arc fault detection where each string input is monitored for arc faults. If an arc is detected, a DC contactor in the combiner box opens, isolating that section of the array. The inverter is able to continue producing energy with the remaining combiners.
