How do I use an EPS inverter? Install a single/double socket close to the inverter that is fed by the EPS output (via a consumer unit). The socket will be powered via the inverter, during normal operation and in the event of a power failure will automatically switch to EPS mode, so long as the battery has capacity. The end user can plug in devices of their choice.

How much power can an EPS Inverter Supply? The EPS can supply up to 5kw of power (approx. 20A in the UK). If you draw more than this (say you have the oven on and then switch on the kettle and microwave), the inverter will overload and shut down requiring it to be reset in order to continue working again.

What happens if an inverter is cut ??? EPs or no EPs? 1) EPS or no EPS, if there is a power cut, the inverter will shut down completely. This is to protect any power line workers that may be working on them. As you can imagine, without this, the power lines could become energised by solar producing homes and that could be an unwelcome shock to someone who will assume the power is off!

How to set up EPs load only with PV? Some customers install the hybrid inverter first as a string inverter (Battery Ready) and add the batteries later, now they can use the back-up without battery. Setting path: Main ??? Settings ??? Advance Setting ??? EPS Setting ??? Super-Backup This function is Disable by default. If users want to supply EPS loads only with PV, just Enable it.

What is the working mode of the inverter? Except for EPS, the inverter automatically enters according to the working conditions, and other modes need to be manually selected by the customer. Working mode: Self Use, Feed-in priority, Backup mode, EPS, Manual, Generator mode, peak shaving. time axis: Allowed discharging period ??? forced charging period.

Why is EPs mode not working on my IHD? Well, you may have noticed on your IHD that occasionally, there is small amount of power being imported during normal operation. In a nutshell, if the inverter can no longer import the small amount of grid power, it assumes there is a power cut and activates EPS mode.

Efficient, economic, safe, and intelligent solar inverter with up to 200% PV oversizing, high charging and discharging efficiency, and built-in shadow tracking. It has IP65 protection, supports high power solar panels, and stores surplus ???
