

ENERGY STORAGE MAINBOARD WIRING

Can energy storage equipment operate in parallel with the grid? In Section 3.1.1 of the Xcel Energy Guidelines for Interconnection of Electric Energy Storage with the Electric Power Distribution System document (Energy Storage Guidelines document), Configuration 1A, the energy storage equipment is not capable of operating in parallel with the grid.

What type of inverter/charger does the energy storage system use? The Energy Storage System uses a MultiPlus or Quattro bidirectional inverter/charger as its main component. Note that ESS can only be installed on VE.Bus model Multis and Quattros which feature the 2nd generation microprocessor (26 or 27). All new VE.Bus Inverter/Chargers currently shipping have 2nd generation chips.

Can an energy storage device be interconnected without an interconnection review? The declaration allows interconnection of the energy storage device without an interconnection review if this mode is secure from change. In Energy Storage Guidelines document Section 3.2.1, Configuration 2A, the energy storage equipment is not capable of operating in parallel with the grid.

How does energy storage work? Energy storage operates in parallel with the grid. Generation, if present, is non-renewable. Metering is standard (non-net-metered). Energy storage and generation, if present, are not allowed to export energy to the grid. The method of achieving #4 must be fully illustrated in the online diagram or described below.

How do I feed-in PV power via an MPPT solar charger? Feed-in of PV power via an MPPT Solar Charger can be enabled or disabled in the Energy Storage Systems menu on the CCGX. For grid-tie inverters, the only option is to use a Fronius grid-tie inverter and use the Fronius Zero Feed-in function. See chapter 2.1.3.

How do I use ESS battery life? Connect to AC when available, keep batteries charged: Use ESS Assistant and select the ???Keep batteries charged??? mode. ??? Not available in the ESS System yet, but it will be implemented. The ESS BatteryLife feature will make sure that the batteries are not unnecessarily cycled around a low SoC.
