ELECTRODE PRESSURE

What size electrode do I need for spot welding? Diameter of the electrode contact surface should be slightly larger than the nugget diameter. For example, spot welding two sheets of 1 mm thickness would require an electrode with a contact diameter of 6 mm. In practice, an electrode with a contact diameter of 6 mm is standard for sheet thickness of 0.5 to 1.25 mm.

What types of electrodes are used in spot welding? that are used in spot welding also vary in terms of their uses. For high heat applications, radial type electrodes are used, truncated tip electrodes are used for high pressure, eccentric electrodes for welding corners, offset eccentric tips for reaching into corners and narrow

What is a resistance spot welding setup? Maintain the pressure to allow the weld metal to cool and solidify. The applied weld times normally range from 0.01 to 0.8 s depending on the thickness of the material, the electrode force, and the electrode tip diameter [2, 3]. The resistance spot welding setup mainly consists of tool holders and copper alloy electrodes. The tool holders are

What is a spot welder used for? of larger, more powerful, and more costly welding transformers. Spot welding is most commonly used in the automobile manufacturing business, where it is nearly routinely used to join the sheet metals of car frames. Spot welders can also be fully automated and many of

How does the geometry of electrodes affect a weld Nugget? The geometry of electrodes in spot welding controls the current density and the resulting size of the weld nugget. Different thicknesses of metal sheets need different welding currents and other process parameter settings.

How many mm should a spot weld be? Thus, a spot weld made in two sheets, each 1 mm in thickness, would generate a nugget 5 mm in diameter according to the $5 \cdot t^{1/2}$ -rule. Diameter of the electrode contact surface should be slightly larger than the nugget diameter. For example, spot welding two sheets of 1 mm thickness would require an electrode with a contact diameter of 6 mm.
