

# FIXED ENERGY STORAGE FIELD

What is fixed energy storage? Fixed energy storage refers to energy storage equipment installed in a fixed position, which can improve the stability and reliability of the power system. Fixed energy storage has a large storage capacity and stability, suitable for long-term operation and can meet large-scale power storage needs.

Can a fixed and mobile energy storage system improve system economics? Tech-economic performance of fixed and mobile energy storage system is compared. The proposed method can improve system economics and renewable shares. With the large-scale integration of renewable energy and changes in load characteristics, the power system is facing challenges of volatility and instability.

What are the different types of energy storage systems? Currently, energy storage systems are divided into fixed energy storage and mobile energy storage, both of which are suitable for different scenarios. Existing researches on energy storage operation and economy focus on fixed energy storage.

What is the energy storage system? The energy storage system includes 1x5 MWx2 h LiB, 1x2 MWx2 h VRFB. And the wind power of 99 MW had been put into operation in August 2012. The system is connected with the 35 kV bus. Through intelligent control, the system stores and releases power according to the coordinating with wind power.

How to analyze the technical and economic feasibility of large-scale energy storage systems? The important basis for correctly analyzing the technical and economic feasibility of large-scale energy storage systems is to determine the capacity investment and operation mode of each system entity in the energy storage power system.
