

# GLASSPOINT MAYOTTE

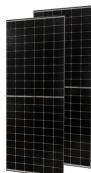

What's going on with GlassPoint & Ma'aden? Having recently concluded an \$8 million Series A funding round, GlassPoint is poised to advance the development of the world's most extensive solar thermal project in collaboration with Saudi Arabia's national mining frontrunner, Ma'aden.

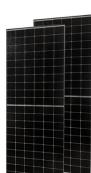

How big is GlassPoint's Ma'aden project? The Ma'aden project is five times bigger than any other industrial solar-powered process heat facility. And GlassPoint continues to quickly gather steam across the globe with an impressive project pipeline representing the removal of 4.4 million tons of CO<sub>2</sub> per year—the equivalent of taking more than a million cars off the road.

Is GlassPoint a good solution for industrial solar heat? GlassPoint is now the sole industrial solar thermal solution with a proven track record at scale essential for addressing the substantial and overlooked \$444 billion industrial heat market's journey towards net-zero. It's significantly improving the economics for adopting solar-powered heat at scale.

Will GlassPoint be liquidated? It was announced that GlassPoint was to be liquidated in May 2020, the company citing low and unpredictable oil and gas prices for the decision.

Why did GlassPoint move to a 'steam as a service' model? GlassPoint announced it has moved to a 'steam as a service' model to reduce up front risk and expand its markets to include hard-to-abate industries producing materials essential to the energy transition, including mining, metals, and manufacturing. The world's first solar EOR project, operated by Berry Petroleum Company in Kern County, CA, USA.
