Haitai Xinneng has partnered with Zonnepark Branderwal BV in the Netherlands to successfully create a large-scale ground photovoltaic power plant with N-type 210 double-sided double glass modules, using over 40000 new 675w TOPCon double-sided double glass modules.

There's also a neutral layer in the middle that doesn't face any compressive stress. That allows double-glass solar panels to offer more mechanical protection, which leads to better cell protection and extends their lifetime usage. 2. Extended power . Dual glass panels can produce more electricity for an extended period of time.

Dual-glass type modules (also called double glass or glass-glass) are made up of two glass surfaces, on the front and on the rear with a thickness of 2.0 mm each. Some manufacturers, in order to reduce the weight of the modules, have opted for a thickness of 1.6 mm. DualSun has chosen to stay with a thickness of 2.0 mm for reasons explained below.
