---

How can we improve the resilience of Haiti's WASH sector?

Recommendations were developed to improve the resilience of Haiti's WASH sector. These cover areas such as governance, infrastructure, water resource management, operational and technical capacity, coordination with key WASH stakeholders, and communication with the Civil Protection.

Does Haiti have a water crisis? This funding aims to support Haiti in achieving universal and equitable access to safe drinking water for all and adequate and equitable sanitation and hygiene for all, particularly in poor and remote areas. In Haiti, rural areas and small towns access to basic drinking water is low and declining.

Do Haitians have access to clean water? Now think about access to the most basic need: clean water. The situation is dire. Only 43% of Haitians in rural areas have access to it, compared to 90% in the rest of Latin America and the Caribbean. The poorest communities are hit the hardest, with only 28% having access to basic clean water, compared to 95% of the richest.

Why is water quality deteriorating in Haiti? In Haiti, recent improvements in access to quality water and sanitation have stalled and, in some areas, deteriorated because of, among other things, prolonged instability, increasing violence and insufficient investment in the sector, said Laurent Msellati, World Bank Country Manager for Haiti.

Does Haiti have basic drinking water? In Haiti, rural areas and small towns access to basic drinking water is low and declining. In 2020, only 43 percent of the rural population in Haiti had access to at least basic drinking water, compared to 48 percent in 2015 and 50 percent in 1990. This situation is generated by a lack of investment in and maintenance of related infrastructure.
