

HONG KONG REE ENERGY

What is Hong Kong's re potential? In the "Hong Kong's Climate Action Plan 2050" published in October 2021, we have set out Hong Kong's RE potential as follows: To expedite transformation to low-carbon energy, we are committed to increase the share of RE in the fuel mix for electricity generation to 7.5% to 10% by 2035.

What is solar energy used for in Hong Kong? In Hong Kong, the primary use of solar energy is to provide hot water for facilities with heating demand or to generate electricity directly. Some small-scale photovoltaic and wind systems have been installed in remote areas to generate nominal electrical power for lighting and on-site data recording equipment.

How can Hong Kong reduce energy consumption? One way to generate those would be through the introduction of an opt-out system (also known as green default) for all businesses, homeowners and tenants in Hong Kong to offset their own electricity consumption through the purchase of renewable energy certificates (REC).

How does Hong Kong get its energy? Hong Kong mostly imports its energy from outside or produces it through some intermediate process. Hong Kong meets all of its coal demand through imports. In 2021, 6.5 million tonnes of coal were imported. In recent years, Indonesia (81.9%) has become the largest supplier, followed by Russia (10.3%), Australia (5.3%) and Canada (2.4%).

Who regulates energy-related affairs in Hong Kong? Energy-related affairs are regulated by the Electrical and Mechanical Services Department (EMSD; Chinese: 机电工程署) under the Development Bureau of the Government of Hong Kong. Energy-related companies of Hong Kong are: Energy-related education centres in Hong Kong include:

HONG KONG REE ENERGY

How much energy is generated by coal in Hong Kong? Most of the energy generated by coal in Hong Kong is for electricity generation. Hong Kong currently has a total of about 5 GW of capacity for coal-fired power stations. Natural gas was first introduced for electricity generation in Hong Kong in 1996.
