

HOT CUBE ENERGY STORAGE EXPERT

Is heatcube a good market for thermal energy storage? The irony for Heatcube is that this low-cost, long-duration thermal storage makes the home country less attractive as a market for thermal energy storage, as Norway already has plenty of low-cost, long-term energy storage in hydro.

Why should you use heatcube? Use Heatcube to run production without producing CO2. No emissions mean another saving ??? no additional CO2 taxes. Heat stored means it is available when you need it. With a secure energy supply, fluctuations in the energy market have less impact, leaving pricing margins safe from political influence. Charge with electricity from renewables.

How does heatcube work? Renewable energy sources, like wind and solar, are intermittent suppliers. Heatcube is the solution to stabilizing this supply to meet mass industrial demand. Simultaneous charging and discharging: the molten salt circulation system is designed for separate charging (electrical heating) and discharging (steam generation).

What is a heatcube? The Heatcube offers a modular and flexible design, fast response time on charge and discharge and no use of dangerous chemicals. It can be configured with storage capacities from 16 MWh to over 96 MWh, with a charge effect of either 10, 20 or 30 MW and a discharge effect for each Heatcube of up to 5 MW. The Heatcube is extremely flexible.

How does heatcube integrate with emerging power market players? This integration not only enhances operational efficiency but also positions Heatcube to align with emerging power market players, providing flexibility and potential new revenue streams for industrial plant owners. With real-time monitoring and control through digital innovation, Heatcube delivers precise heat storage optimization.

How many mw can a heatcube hold? It can be configured with storage capacities from 16 MWh to over 96 MWh, with a charge effect of either 10, 20 or 30 MW and a discharge effect for each Heatcube of up to 5 MW. The Heatcube is extremely flexible. It will go from standby to charge in less than one minute and allows for simultaneously charge and discharge.
