Australian households and businesses are increasingly adopting solar power due to its environmental and economic benefits.

Solar regulators often short the solar panel input when regulating. This does not damage the solar panel, but it does mean that the solar regulator must be sized to handle 125% of the solar panel's rated short circuit current. Example: A BP Solar 80W solar panel has a rated output current of 4.55 Amps and a rated short circuit current of 4.8 Amps.

HOW DOES SOLAR POWER WORK IN AUSTRALIA
