

The schematic diagram illustrates the proposed system architecture. On the left, a building facade features various components: a solar panel array, a PV Combiner box, Air Passage, Air Conditioning unit, High Voltage Box, and a Door. A cable runs from the top of the building down to a central control unit labeled 'Control'. This control unit is connected to a 'PV' source. The 'PV' source feeds into a 'PVF' (Photovoltaic Field) component. The output of the PVF goes through a 'High Voltage' step-up transformer. The resulting high voltage is transmitted via a power line to a 'Power Grid'. A 'Generator' is also shown connected to the Power Grid.
