

HOW TO SOLVE THE PROBLEM OF SHORT OUTDOOR ENERGY STORAGE TIME OF NEW EQUIPMENT

How can energy storage solve a power shortage? Second, electrical energy storage is the most reliable way to solve the mismatch. Energy storage systems store excess renewable energy ($r(??) < 0$) and discharge for the power shortage ($r(??) > 0$). Different storage systems have various characteristics.

What is a short-duration energy storage system? First, short-duration ($2\text{---}10$ h) energy storage systems such as batteries are mainly used to solve the diurnal mismatch, achieving about 75% load coverage with sufficient solar and wind power. In the meantime, batteries are utilized to curtail the peak of renewable generation, thereby reducing the wire size.

What is the recommended discharging priority of energy storage equipment? The recommended discharging priority of the battery and TES system is TES first. The LCOS of energy storage components decreases as the increase of yearly cycles. Reasonable configuration of energy storage equipment could solve the mismatch problem between load demand and renewable power output.

How can energy storage solve a seasonal mismatch? Third, with renewable energy penetration booming, long-duration ($100\text{---}650$ h) energy storage technologies are vital to solve the seasonal mismatch, including hydrogen storage and large-scale pumped storage.

Can cooperative energy storage systems achieve better performance? The short- and long-duration cooperative energy storage system is an effective and promising way to reach better performance. However, it is unclear the comprehensive performance of systems with different short- and long-duration energy storage combinations.

HOW TO SOLVE THE PROBLEM OF SHORT OUTDOOR ENERGY STORAGE TIME OF NEW EQUIPMENT

How long should energy storage last? From a static perspective on the ultimate circumstance, the suitable storage duration is approximately 37-185 h since excessive storage duration wastes either the capacity or power. Therefore, it is crucial to develop medium- and long-duration energy storage technologies.
