

HOW TO USE SOLAR POWER IN MOTORCYCLE TOURS

Can a solar panel be used on a bike tour? As obvious as it may sound, you need relatively sunny weather to power the solar panel. If you are going on a bike tour in an overcast time of year, you can expect to get very little use out of a solar panel. Depending on what devices you plan to charge with your solar panel will also dictate what type of results you will get.

Can I use solar to charge my motorbike? Use Solar! Maybe your motorbike is stored in a garage, shed or passageway with no mains power or maybe it's just on the drive. Getting power to a normal mains powered battery charger / trickle charger in these circumstances can be difficult and messy with trailed cables and the problem of weatherproofing 230V electrical equipment.

How many watts a solar panel should a bike tourer use? The watt amount of your solar panel is also important, you don't want a small solar panel that only pumps out a couple watts. Most bike tourers use anything around 20 watts or higher. Also depending on your charge load you could get away with a lower amount like a 10W.

Can a solar panel be mounted on a bike? If you have the solar panel mounted on your bike while riding. The direction your panel is facing to the sun, any shade and other factors when riding around and always changing directions will effect the power you end up accumulating. The Goal Zero Nomad Plus range comes in three different models the 7, 14 and 28 watt.

Are solar panels good for bikepacking? If you are heading off on a week long bikepacking adventure in the mountains, and the weather is forecasted for sunny days, you should be all good. Keep in mind that solar panels charge your devices slower than the performance you could get out of a wall charge, at a coffee shop or something. The time available to charge is a consideration.

HOW TO USE SOLAR POWER IN MOTORCYCLE TOURS

Could a solar panel Charger be a battery pack? One thing I would like to see in the ultimate solar panel charger is if they would build in a battery pack, that has the option to charge while charging other devices. But this could use potential power that could be used to charge devices, but lets see what happens.

Part 2 discovers what it's like to run a motorcycle tour company and what is involved. **RUNNING A MOTORCYCLE TOURING COMPANY.**
ADVRider: Now that we know a bit about you both, let's talk about MotoAdventours and what it takes to run the company. Running a moto tour company has to be interesting, exciting and sometimes exasperating.

New from OptiMate, a solar charger that works by day and night. OptiMate's ground-breaking solar kits can save a "dead" motorcycle battery and provide safe long term maintenance, using only the sun's power ??? ideal for ???

Motorcycle Tour Map ; Motorcycle trips are all about the journey, rather than a destination. That is why opening a detailed map during or before the tour, will help you gain a bigger picture of where you are and what roads to take. Motorcycle ???

Converting Solar Energy into Electric Power. The solar panels capture sunlight and convert it into direct current (DC) electricity. A charge controller then manages the electrical flow so that the motorcycle's battery can ???

HOW TO USE SOLAR POWER IN MOTORCYCLE TOURS

When calculating the power of an electric motorcycle we measure in Kilowatts (kW). The more kW the bike has, the tighter you have to hang on when it takes off. The same goes for your electricity usage in your home ??? the more appliances you are using at the same time ??? the more kW's you are consuming. How to work out how many KM's a solar
