

# HOW TO WRITE THE ANNUAL REPORT ON POWER STORAGE

When will energy storage become a trend? Pairing power generating technologies, especially solar, with on-site battery energy storage will be the most common trend over the next few years for deploying energy storage, according to projects announced to come online from 2021 to 2023.

Do energy storage systems generate revenue? Energy storage systems can generate revenue, or system value, through both discharging and charging of electricity; however, at this time our data do not distinguish between battery charging that generates system value or revenue and energy consumption that is simply part of the cost of operating the battery.

What is the ratio of battery storage to co-located resource power capacity? The ratio of battery storage to co-located resource power capacity is scheduled to significantly increase over the next few years. On average, existing co-located projects have a 1:10 battery storage power capacity to co-located generator capacity on a power rating basis, while planned projects have a ratio of 1:2.

How has the IRA accelerated the development of energy storage? The Inflation Reduction Act (IRA) has also accelerated the development of energy storage by introducing investment tax credits (ITCs) for stand-alone storage. Prior to the IRA, batteries qualified for federal tax credits only if they were co-located with solar. Wind.

What is the average power capacity of a battery storage system? For costs reported between 2013 and 2019, short-duration battery storage systems had an average power capacity of 12.4 MW, medium-duration systems had 6.4 MW, and long-duration battery storage systems had 4.7 MW. The average energy capacity for the short- and medium-duration battery storage systems were 4.7 MWh and 6.6 MWh, respectively.
