Hybrid solar inverters offer the best of both worlds-on-grid and off-grid. If your solar generation is low, you can pull power from the grid. And when the grid is down, you can use your battery backup to power appliances! Unlike off-grid solar inverters, the hybrid solar inverters remain switched on at all times for an uninterrupted power supply.

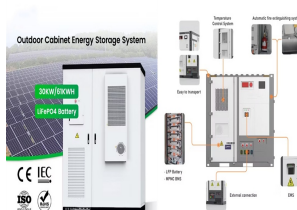

Hybrid inverter: The hybrid inverter, on the other hand, is an advanced device that integrates both grid-connected and off-grid functions. It not only performs all the functions of a grid-connected inverter, i.e. efficiently converting DC to AC for grid connection, but is also equipped with an additional energy storage management system that

A hybrid solar inverter integrates the functions of a traditional solar inverter and a battery inverter into a single unit. It not only converts direct current (DC) from solar panels into alternating current (AC) for residential or commercial use but also has the capability to store excess energy in batteries for later use.
