How does a nitrogen tank work? The tank is usually fitted with a dispense pipeline system to dispense the nitrogen in either liquid or gaseous form (or both) to the end use applications (e.g. cold storage). Liquid dispense pipelines are always insulated to reduce product losses caused by vaporisation of the liquid.

Can a liquid nitrogen tank be transported in a lift? No tank or Dewar or cylinder containing liquid nitrogen shall be transported within a building or in a lift if it has any visible leaks or defects (always check the equipment first before entering the building or lift).

What is a liquid nitrogen storage & supply facility? Liquid nitrogen storage and supply facilities, within life science applications, must therefore be planned, with the health and safety of laboratory, delivery, maintenance and other personnel paramount. Scientific processes require the use of liquid nitrogen in a number of applications.

Can you use liquid nitrogen directly from a storage tank? Contact with the eyes can cause permanent damage. When considering the risks of cold burns associated with the manual handling of liquid nitrogen containers, the use of insulated piped liquid nitrogen supplies directly from a storage tank is strongly recommended. Where manual handling cannot be avoided, users should apply the following guidance.

What are the risks associated with using liquid nitrogen? The major hazards associated with the use of liquid nitrogen are potential exposure to oxygen deficient atmosphere, direct skin contact with extremely cold liquid and sudden pressure release. These can result in asphyxiation, cold burns and physical trauma.

What is the maximum allowed working pressure for a cryogenic storage tank? In North America, pumping systems for transferring oxygen, ni-trogen, or argon are typically capable of delivering pressures greater than 400 psig (2760 kPa).¹ The cryogenic storage tank being refilled usually has a maximum allowable working pressure (MAWP) that is considerably less than the pump discharge pressure.
