Suppose, in our case the load is 3000 Wh/per day. To know the needed total W Peak of a solar panel capacity, we use PFG factor i.e. Total W Peak of PV panel capacity =  $3000 / 3.2$  (PFG) = 931 W Peak. Now, the required number of PV panels are =  $931 / 160W = 5.8$ . This way, we need 6 numbers of solar panels each rated for 160W.

There is yet to be any significant research into the wider economic cost of solar panel recycling. According to Gavin Heath of the National Renewable Energy Laboratory, recycling solar panels in the US costs around \$10-20 per module. What's the typical lifetime of a solar panel? The average lifespan of a solar panel is 25-30 years.
