---

Are photovoltaic power generation policy Synergy based on text mining? A quantitative analysis of policy synergy based on text mining We quantitatively examine photovoltaic power generation policy synergies in China. This study expands the existing quantitative research on policy content analysis. China employs strong administrative power approaches, such as macro planning.

How are photovoltaic power generation policies evaluated? Initially, the evaluation of photovoltaic power generation policies mainly focused on qualitative evaluations, which revealed existing problems by sorting the types of policies and summarizing the impacts of their implementation (Huo and Zhang, 2012; Grau et al., 2012; Zhang et al., 2014; Yang and Zhao, 2018; Gao and Rai, 2019).

What is the 'guidance' for the energy storage industry? Based on the above analysis, as the first comprehensive policy document for the energy storage industry during the ???14th Five-Year Plan??? period, the ???Guidance??? provided reassurance for the development of the industry.

What are the policy goals of photovoltaic power generation? The policy goals of photovoltaic power generation are divided into three aspects: improving technology and promoting production, promoting construction and application, and guaranteeing and maintaining application effects.

How does China manage photovoltaic power generation? (3) Research on policy measures indicate that China relies more on traditional administrative resources when formulating photovoltaic power generation policies and employs approaches with strong administrative power, such as macro planning, regulation and supervision, and fiscal policies.
