Large generation & batteries An embedded generating system (such as solar) is one that is connected to an electricity distribution network rather than to the high-voltage transmission network. Embedded generating (EG) systems vary in type and size from a typical 1 kW domestic solar photovoltaic (PV) unit to a 50 MW wind farm, and may include

How batteries work. During the day, the network batteries are charged with rooftop solar energy. And at night, they are used to power homes and businesses with renewable energy. While the batteries cannot supply all of the communities' power needs, they are becoming an important tool to help us manage the evening peak.
