Which energy storage solutions will be the leading energy storage solution in MENA? Electrochemical storage(batteries) will be the leading energy storage solution in MENA in the short to medium terms,led by sodium-sulfur (NaS) and lithium-ion (Li-Ion) batteries.

Which energy storage technology has the most installed capacity in MENA? Pumped hydro storage(PHS) has the largest share of installed capacity in MENA at 55%,as compared to a global share of 90%. Pumped hydro storage is one of the oldest energy storage technologies,which explains its dominance in the global ESS market.

What is an energy storage system? An energy storage system is charged from the grid or by on-site generation to be used at a later time to take advantage of price diferentials. Energy storage is used instead of upgrading the transmission network infrastructure. The storage system provides the grid with the necessary output to ensure the voltage level on the network remains steady.

Will energy storage expand in MENA? The current utility business model limits the prospects of energy storage expansion opportunities, unless driven by direct governmental support. Auctions in MENA have been a major driver for renewable energy deployment, most notably for solar and wind, but only a few have included energy storage.

How to choose a technology for energy storage? For energy storage, in addition to the stored electricity, the values accrued from stacked services such as spinning reserves, frequency regulation, and energy arbitrage are major criteria in the selection of technology and its applications.
