

IS THE SURGE IN LITHIUM PRICES A POSITIVE OR NEGATIVE DEVELOPMENT FOR ENERGY STORAGE

Why have Lithium prices stabilized in 2024? As of 2024, lithium prices have stabilized from their major plunge of 2022-2023. The current price is attributed to several factors: Increased Demand: The global shift towards electrification and decarbonization has accelerated the demand for lithium-ion batteries. EVs, energy storage systems, and consumer electronics continue to drive this demand.

How have Lithium prices changed over the past decade? Lithium prices have seen dramatic changes over the past decade. From 2010 to 2015, prices remained relatively stable, with minor fluctuations due to steady demand and supply conditions. However, from 2015 onwards, prices began to soar, driven by the booming EV market and increased demand for renewable energy storage solutions.

Is the lithium market facing a shortfall in 2034? Per Benchmark, the lithium market could face a shortfall of 572,000 tonnes by 2034, 7x larger than current surpluses. While over one million tonnes of mined lithium are expected in 2024, this output must grow to 2.7 million tonnes by 2030 to meet rising demand, particularly from the EV sector.

Will a looming lithium deficit impact the EV market? Forecasts indicate a looming lithium deficit that could significantly impact the EV market. Per Benchmark, the lithium market could face a shortfall of 572,000 tonnes by 2034, 7x larger than current surpluses.

How will the future of Lithium prices be shaped by geopolitical factors? Efforts to reduce dependence on imported lithium are driving investments in local mining projects, which, in turn, affect global supply and pricing dynamics. Looking ahead, the future of lithium prices is shaped by a combination of technological, economic, and geopolitical factors.

IS THE SURGE IN LITHIUM PRICES A POSITIVE OR NEGATIVE DEVELOPMENT FOR ENERGY STORAGE

Is the lithium market a risky market? The lithium market is exposed to risks, including volatile energy prices and geopolitical tensions. The reliance on lengthy mine development timelines poses a critical challenge, potentially delaying the supply chain's ability to meet rising EV demand. However, the market also offers substantial opportunities.

Current Market Analysis. As of 2024, lithium prices have stabilized from their major plunge of 2022-2023. The current price is attributed to several factors: Increased Demand: The global shift towards electrification and

Following a 2022 realignment, Albemarle now operates two primary business units, with a particular focus on lithium-ion battery and energy transition markets under its Albemarle Energy Storage unit. This division

Lithium has a broad variety of industrial applications. It is used as a scavenger in the refining of metals, such as iron, zinc, copper and nickel, and also non-metallic elements,

The electric vehicle (EV) market is undergoing an extraordinary period of growth. In recent years, sales have surged, with nearly 14 million EVs sold in 2023 alone, marking a 33% increase from 2022. This rapid acceleration
