Which hot-water supply method is best for Japanese houses? The use of a latent heat collection-type water heater is the most efficient hot-water supply method using gas, and it is also economically efficient. The results suggest that it is the optimal hot-water supply method for Japanese houses. Keywords: Hot-water supply, Efficiency, Energy, Water heater

Do heat pump water heaters save energy in Japan? Approximately 30% of the final energy consumption by households in Japan is used for the hot-water supply, of which approximately 90% is covered by direct burning of fossil fuel (see Figure 3-1-1). Spread of efficient heat pump water heaters may contribute significantly to energy saving (see Figure 3-1-2).

How efficient is utility gas in Japan? Utility gas is primarily imported into Japan from abroad. Its energy efficiency will hardly be reduced during its supply to each house, and instead depends on the heat efficiency of the equipment used by each household. This suggests that the economic efficiency of utility gas is high.

How does EcoCute hot water storage tank work? The hot-water storage tank has a double reservoir construction made of stainless steel panels to restrict the high temperature hot-water mixing with low temperature hot-water cooled down by circulation heating. By using low cost midnight power, EcoCute stores hot-water and accumulates heat in the hot-water storage tank for cleaning.

Who invented solar hot water in Japan? The history of use of solar-powered hot water systems in Japan perhaps can be traced back to the work of Ei-ichi Okamoto who founded Chiryu Heater in 1944, a solar thermal company that has relentlessly produced collectors and tanks since 1957.

Are heat pump water heaters popular in Japan? As described in the above, the National Team of Japan conducted research and studies under TASK1 in Japan where heat pumps are popular, and summarized the information on the market conditions surrounding hot-water supply equipment, the recent state of heat pump water heater development, and studies on utilization of new heat pump water heaters.
