---

What is Skovgaard energy? Skovgaard Energy believes that expansion and utilization of renewable energies, wind, solar, bioenergy and power to X is essential for our common future. At Skovgaard Energy, we take pride in making the best use of natural resources.

Why is electricity expensive in Kosovo? Usually, in Kosovo the imported energy is much more expensive than export. This is because Kosovo imports energy one day before needed, in the other hand energy is exported during the night when the demands are under generating level. Imports and exports have a negative impact for electrical energy price.

Does Kosovo need a lignite power plant? Kosovo, rich in lignite coal reserves, relies on outdated Yugoslav-era power plants that cannot meet its increasing energy demands. The 2023 National Energy Strategy aims to raise renewable energy to 35% of the energy mix, reduce greenhouse gas emissions by 32%, and phase out a lignite-fired power unit by 2031.

What is the energy strategy for Kosovo? The Kosovo energy strategy includes increasing RES capacity to 35% of electricity consumption by 2031. Aiming for 600 MW wind, 600 MW solar PV, 20 MW biomass & at least 100 MW of prosumer capacity, to reach a total installed RES capacity of 1600 MW by 2031. Lignite exploitation in Kosovo started in 1922.

Does Kosovo have solar power? Kosovo has the potential of capturing solar energy directly and converting it to electricity. The region of highest solar potential based on global horizontal irradiation is the southeastern part of Kosovo, centred around the city of Gjakova. Solar power is already used on the roofs of some buildings.

Which companies are affecting the energy sector in Kosovo? Besides government institutions, there are also companies with great impact in energy sector such as Kosovo Energy Corporation ( KEK ), Transmission, System and Market Operator ( KOSTT) and Kosovo Electricity Distribution

and Supply (KEDS). A lot of legislative documents that aim the adjustment of electricity sector have been approved.
