

What's new in large-scale energy storage? This special issue is dedicated to the latest research and developments in the field of large-scale energy storage, focusing on innovative technologies, performance optimisation, safety enhancements, and predictive maintenance strategies that are crucial for the advancement of power systems.

Why are large-scale energy storage technologies important? Learn more. The rapid evolution of renewable energy sources and the increasing demand for sustainable power systemshave necessitated the development of efficient and reliable large-scale energy storage technologies.

How can a long-duration energy storage system be improved? Addressing these challenges requires advancements in long-duration energy storage systems. Promising approaches include improving technologies such as compressed air energy storage and vanadium redox flow batteriesto reduce capacity costs and enhance discharge efficiency.

What role does energy storage play in the future? As carbon neutrality and cleaner energy transitions advance globally, more of the future's electricity will come from renewable energy sources. The higher the proportion of renewable energy sources, the more prominent the role of energy storage. A 100% PV power supply system is analysed as an example.

What technologies can be used for energy storage? Other technologies include liquid air energy storage, compressed air energy storage and flow batteries, which are currently in development and would benefit from investor support. Large scale storage provides the grid with both security and flexibility to dispatch electricity to manage seasonable peaks or low renewable output over a period of time.

What is a long-duration energy storage system? Toronto-based Hydrostor Inc. is one of the businesses developing long-duration energy storage that has moved beyond lab scale and is now focusing on building big things. The company makes systems that store energy underground in the form of compressed air, which can be released to produce electricity for eight hours or longer.
