

# LITHIUM BATTERY AND ENERGY STORAGE OPERATION AND MAINTENANCE

What is a lithium battery energy storage system? A Lithium-ion Lifepo4 Battery Energy Storage System is a large-scale system, such as 300kWh or 500kWh, that stores power when the power is surplus and outputs the stored power to the grid through the inverter when the power is insufficient.

How to maintain the life of a lithium ion battery? You can maintain the life of your lithium-ion battery by charging it properly and taking good care of it. If you're going to store lithium batteries, charge them to 50% and check on them every 2-3 months to make sure they're holding their charge. Follow the product's instructions for charging it the first time.

What is the safety test basis of lithium batteries for energy storage? The safety test basis for lithium batteries used for energy storage is the GB/T36276 national standard, which officially started in January 2019.

What types of batteries can be used in a battery storage system?  
Abstract: Application of this standard includes: (1) Stationary battery energy storage system (BESS) and mobile BESS; (2) Carrier of BESS, including but not limited to lead acid battery, lithium ion battery, flow battery, and sodium-sulfur battery; (3) BESS used in electric power systems (EPS).
