

# LONDON ELECTRICITY STORAGE PRICE QUERY

Does London power offer fair priced energy plans? Through our fair priced energy plans, London Power can support them and help those struggling to make ends meet. As London Power grows, even more Londoners will be able to benefit from energy that is always fair, affordable, and green.

Can a supplier charge less than the limit? Suppliers can also charge less than the limit for either standing charge or unit rate. The unit price rate is the rate charged per unit or kilowatt hour (kWh) of electricity or gas you use. The standing charge is a cost that is included in each electricity and gas bill.

What is Britain's biggest source of electricity? This year, for the first time ever, renewables overtook fossil fuels to become Britain's biggest source of electricity. Wind, solar, hydro and biomass sources combined to provide 39% of electricity consumed, while coal generation hit record lows.

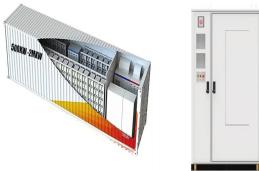

Are Londoners on a high-cost variable tariff? We want to reach Londoners who have never or rarely switched suppliers and are thus likely to be on a high-cost standard variable tariff. A recent survey of London Power customers revealed that 24% had not switched energy supplier in the past three years. A further 7% had never switched supplier before.

BESS provides businesses with a higher degree of energy price security and independence. In an era of increasing energy price volatility and potential grid instability, having a dedicated energy storage system means businesses can maintain operations during price spikes or grid failures. This is particularly crucial for industries where

# LONDON ELECTRICITY STORAGE PRICE QUERY

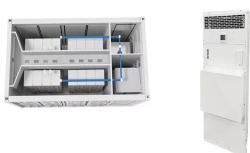

Wind and solar energy will provide a large fraction of Great Britain's future electricity. To match wind and solar supplies, which are volatile, with demand, which is variable, they must be complemented by using wind and solar generated electricity that has been stored when there is an excess or adding flexible sources.

In addition, London Power offers the GBP140 Warm Home Discount (WHD) to help meet energy costs, and as of March 2021, the WHD was offered to 208 customers. Moreover, London Power refers customers who need more help to the Mayor's Warm Homes Advice Service to help receive energy efficiency improvements, lower bills, and maximise their income

A shocking 404,000 London households live in fuel poverty. The Mayor's Fuel Poverty Action Plan sets out what we are doing to help low income Londoners heat their homes. The Mayor's fuel poverty and energy efficiency projects are: Warmer Homes?? GBP43m grant funding for heating and insulation measures that will improve the energy efficiency of fuel poor Londoners.

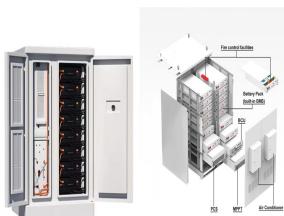

Electricity storage can directly drive rapid decarbonisation in key segments of energy use. In transport, the viability of battery electricity storage in electric vehicles is improving rapidly. Batteries in solar home systems and off-grid mini-grids, meanwhile, are a?

Renewable energy is typically stored during so-called off-peak hours; when the demand is lower than the available renewable energy, hence when energy prices are low. Conversely, renewable energy is discharged during peak hours, when the prices are high due to the fact that demand is higher than available renewable energy. In other words, energy

Dynamic time-of-use electricity pricing for residential demand response: Design and analysis of the Low Carbon London smart-metering trial April 2015 DOI: 10.13140/RG.2.1.2663.6644/2

The board was formed as the London Electricity Board on 1 April 1948 as part of the nationalisation of the electricity industry by the Electricity Act 1947. The LEB was privatised in 1990 under the Electricity Act 1989, as London Electricity plc.. The company was acquired by Entergy, a US company, in 1996 and then by Electricite de France in November 1998. [1]

The National Grid covers most of mainland Great Britain and several of the surrounding islands, and there are interconnectors to Northern Ireland and to other European countries. Power is supplied to consumers at 230 volts AC with a frequency of 50 Hz 2023 about a third of electricity used in Britain was generated from fossil gas and two-thirds was low-carbon power.

Electricity cannot yet be stored on a large scale, but technological advances leading to cheaper and more efficient industrial batteries make grid-level storage of electricity surpluses a natural choice. Because electricity prices can be negative, it is
