

MAIN ISSUES OF USING ENERGY STORAGE IN PRIVATE COURTYARDS

Do courtyards reduce energy consumption? The present study, through a pooled analysis of experimental and numerical data, intends to assess the beneficial effect that the courtyards have in reducing the energy consumption of the buildings, especially for cooling demand.

Is there a relationship between energy-saving and a courtyard's geometry? The greater the previous relationship, the greater the reduction in the demand for refrigeration. This implies that there is a direct interaction between energy-saving and the courtyard's geometry conceived as the relationship between the courtyard's surface and the area of the building facades that surround it.

Does energy storage industry need a policy guidance? Sungrow Power Supply Co., Ltd.: energy storage industry needs the policy guidance urgently. Machinery & Electronics Business; 2015-6-22: A06. Policy and innovation are key factors for the development of energy storage technology. China Electric Power News; 2016-4-28: 008. Lin Boqiang.

Is energy storage a precondition for large-scale integration and consumption? So to speak, energy storage is the precondition of large-scale integration and consumption of RES. However, China's energy storage industry is at the exploration stage and far from commercialization. This restricts the development of RES to certain extent. For this reason, this paper will concentrate on China's energy storage industry.

Does energy storage need a reasonable electrovalence policy? The large-scale promotion of energy storage needs reasonable electrovalence policy. China Energy News; 2015-9-28: 017. The price and subsidy scheme of micro grid will be issued and the energy storage industry would step in new era. Shanghai Securities News; 2015-6-4: F02.

MAIN ISSUES OF USING ENERGY STORAGE

IN PRIVATE COURTYARDS

Does a courtyard reduce cooling demand? This reduction, compared with the building without the effect of the courtyard, rise up to values that can reach up to approximately 10% in the rooms located at a middle height of the courtyard and with a high percentage of facade in contact with it. Globally, the reduction in cooling demand obtained is 7% for the spaces bordering the courtyard.

The main conclusion of the research is that the use of courtyards as functional devices, paying particular attention to their geometry, is a key factor in the cooling energy demand of buildings. ???

In this regard, recently, certain architectural studies have been done dealing with the effects of transitional spaces on buildings??? energy consumption. Two main types of transitional spaces, which are courtyard and atrium, are used widely ???

It defines courtyards and their roles in buildings. It describes different types of traditional courtyards found in India and their functions. It discusses the importance of courtyards in ancient Indian texts like ???

Typically, Arabian courtyard houses are multi-storeyed with a basement floor for seasonal use and storage, a ground floor centred around a courtyard and a first floor reserved for private areas. The interior spaces of ???
