

# MEIJING ENERGY STORAGE PROJECT

---

How a new energy storage system is developing in China? Dai Jianfeng, a deputy chief engineer of China Electric Power Planning and Engineering Institute, said the new energy storage in China has been developed through diverse technology routes. According to him, lithium-ion battery is still dominant at present, but the development of compressed air and liquid flow battery is accelerating.

Why is energy storage important in China? Developing energy storage is an important step in China's transition from fossil fuels to renewable energy, while mitigating the effect of new energy's randomness, volatility and intermittence on the grid and managing power supply and demand, he said.

How big is China's energy storage capacity? **FAST GROWTH** According to a report recently issued by China Energy Storage Alliance (CNESA), by the end of 2022, China's cumulative installed capacity of new energy storage reached 13.1 gigawatts, with an annual growth rate of 128 percent.

How big will China's energy storage capacity be in 2027? The CNESA report estimated that China's cumulative installed capacity of new energy storage in 2027 may reach 138.4 gigawatts if the country's provincial-level regions achieve their targets of energy-storage construction.

## TECHNOLOGY ADVANCE

Where is China's first large-scale flywheel energy storage project? From ESS News China has connected to the grid its first large-scale standalone flywheel energy storage project in Shanxi Province's city of Changzhi. The Dinglun Flywheel Energy Storage Power Station broke ground in July last year.

What is the utilization rate of new energy storage in China? According to Shu Yinbiao, an academician at the Chinese Academy of Engineering, the utilization rate of new energy storage in China is not high, with the average utilization rate indexes for grid-side, user-side, and mandatory allocation of new energy storage projects reaching 38 percent, 65 percent and 17 percent, respectively.

Car dumper unloading system is efficient, energy-saving bulk material continuous unloading equipment that is widely applied in bulk material storage and conveying field such as port, metallurgy, electric power industries, etc. Up to now, DHHI a?|

Two molten salt storage tanks, operating at high and low temperatures of 390°C and 190°C respectively, provide a total storage capacity of 1,000 megawatt-hours. By a?|

Beijing Energy Holding Co will invest in constructing a new long-duration energy storage power station in Hohhot and introduce supporting long-duration vanadium liquid flow a?|

New energy storage, or energy storage using new technologies, such as lithium-ion batteries, liquid flow batteries, compressed air and mechanical energy, is an important foundation for building a new power system in China, a?|
