Question: Can I use an off-grid inverter to fool my grid-tied inverter into producing power when the grid is down? Short Answer: You want an AC coupled solution to get power from your GTI when the grid is down. If starting from scratch, check out hybrid inverters. Long Answer: GTIs are current sources (e.g., Enphase IQ7s). These aren't like voltage sources (e.g., a UPS, ???)

In theory you can add grid-tie inverters to your inverter "grid", but if your power draw ever fell below what the grid-tie panels are producing it would feed current into the inverter and it would hopefully just fault, but possibly fry. To use the micro-inverters in an off-grid setup you would need something like an EG4 or Sol-Ark HYBRID

With Enphase IQ7 you can't get power out of them when the grid is down, only the IQ8 has grid forming capability. The IQ7 is required to shutdown with grid failure it needs grid to sync to. With the IQ8 and grid forming, you still need the IQ switch controller (~\$5k) that disconnects the grid in ul1741, CA Rule 21, way to comply with utility rules.
