Integrated with a CATL LFP battery solution, the smart solution provides safe energy storage and management of power generation output. The system features 1+1 redundancy of batteries, with a cluster cabinet containing 2*51.2KWH batteries connected in parallel with other clusters to allow for switching in the event of failure.

According to a report, Battery failures account for more than half of all UPS failures. For users, when choosing a battery, battery technology, price, and product quality should be considered. UPS power supply applications normally use the VRLA ???
